Zurich, 25 May 2023

MESPAS launches business intelligence API

MESPAS has recently launched a new application programming interface (API) for business data. This helps managers to improve data analysis and make informed decisions concerning goals and strategy.

Using the new API MESPAS customers can now seamlessly connect their MESPAS data with their own business intelligence systems.

They can export their MESPAS data to their system and create their own dashboards. These provide data for analysis such as statistics, KPIs and detailed reports. This information in turn provides a basis for making important business decisions and can help improve business efficiency.

Customers can use existing dashboards and reports or create their own, tailored exactly to their individual needs. The data is clearly structured and easy to use. Data from other sources can also be easily integrated.

MESPAS constantly strives to provide their customers with tools to support optimal business performance in the maritime area.

About MESPAS

MESPAS is an independent Swiss IT and engineering company, with subsidiaries and partners throughout the world. Our technical ship management software enables our customers in the maritime industry to run their ships safely and efficiently, resulting in better performance, decreased costs and lower emissions.

Our e-trading platform connect.mespas.com allows ships, management offices and suppliers to digitally place and receive offers, orders and invoices.

MESPAS is the only company in the maritime industry whose products are provided on cloud-based software, with a unique library of millions of machine types, spare parts and documents, all instantly available to our customers to improve their business processes.
