MSI Ship Management completes MESPAS implementation

Singapore-based MSI Ship Management has completed the roll-out of MESPAS Technical Ship Management software across their fleet of 44 ships.

“Crews prefer a simple and easy-to-use software for their daily work. This is unlike their private life when they enjoy exploring complicated mobile applications for amusement, a professional software needs to be understood immediately to grant the crews’ awareness. This was a major factor during the evaluation of a new system, MESPAS fulfils this requirement.” stated Captain Sanjay Ramnathan, managing director of MSI Ship Management in the project review meeting in August.

The positive attitude of the crews, the close collaboration between MSI office staff and the MESPAS project team resulted in an unrivalled performance during the software implementation. Within only three months, all machinery data (including spare parts) had been added and MESPAS went live on MSI’s entire fleet of 44 ships.

“Our key aim is to bring value to our clients by enabling their assets to run safely, efficiently and profitably,” further said Sanjay Ramnathan during the software evaluation to the MESPAS local sales manager in Singapore, Shridhar Viswanathan. Ensuring that MSI complies with their mission, MESPAS is now improving their safety module together with the new customer. New functionalities for vetting, SIRE, TMSA and IMO DCS are currently added to best provide all software tools for tanker management companies.

“Gaining a customer like MSI clearly indicates that we are on the right way with steadily improving our software’s modules and features, also does it show that our new local presence due to the recent opening of a subsidiary in Singapore is desired and appreciated by existing and potential customers.” concludes Dominic Seiler, MESPAS’ Head of Sales and Marketing.

About MESPAS

MESPAS is a Swiss-based, independent IT and engineering company with subsidiaries and partners all around the world. Given our prime focus on technical ship management software we assist our customers in the maritime industry in maintaining their ships efficiently and safely, resulting in higher performance and lower emissions. On our e-trading platform connect.mespas.com meet thousands of ships, management offices and suppliers. Since our very beginnings we have been running all our software products on a centralised multi-tenant database with an extensive structured machinery data library available to the entire MESPAS Community.
