

MESPAS Cube

Many operators know that managing the IT-side of a technical fleet management system on board of a vessel can be somewhat of a challenge. Installing a server, maintaining it, and implementing stringent back-up procedures, all these are tasks which require profound IT knowledge and administrative costs.

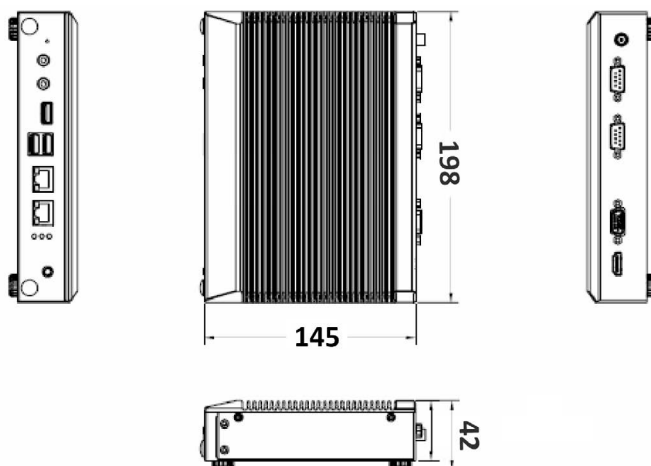

MESPAS accounts the IT challenges on board of vessels by introducing the MESPAS Cube. The MESPAS Cube is an offshore server (small industrial design PC) with no moving parts, compact and handy as an external hard disk and therefore perfectly suited for the marine environment . It comes pre-configured with the vessel-specific database and the MESPAS Physical Asset Management software.

The crew needs no special knowledge, it simply connects the MESPAS Cube to the network on board. The MESPAS cube is only accessible from the MESPAS Offshore Clients to prevent security issues such as malware or viruses. Everything is pre-installed, all configuration will be done automatically. In addition, synchronization between ship and shore can easily be automated.

Professional solution with MESPAS Cube

Dimensions (W x H x D) 198 x 42 x 145 mm (7.8" x 1.65" x 5.7")

Easy Setup and Installation

The MESPAS Cube comes pre-configured with the vessel-specific database and the MESPAS PAM software. Installing the Cube on board therefore consists only of two steps: connecting the cube to the LAN and installing the MESPAS PAM Client on one or multiple PCs on board. After starting the MESPAS client, it automatically searches the network for the database and will establish a connection with it.

Features

- Robust and stable
- Closed casing
- Accessible from all on-board PCs
- Tailored to the marine environment
- Network capability and multi-user functionality
- Linux operating system

The most innovative way of accessing and using ICT solutions in the shipping industry. Efficient, scalable, complete – at predictable, low costs.
