

MESPAS MRV

Monitoring, Reporting and Verification of carbon dioxide emissions; the EU regulation 2015/757 for the shipping industry. Are you already compliant? And ready for the upcoming, comparable IMO-regulation, too? MESPAS MRV is prepared to assist you with a fully integrated MRV process flow.

By using MESPAS products, **all involved parties will be able to access the very same information** reported by your crews on board of your vessels: your onshore teams, the MRV verifier of your choice and even public authorities – if you desire so.

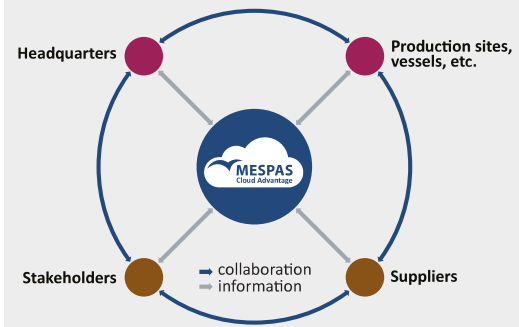

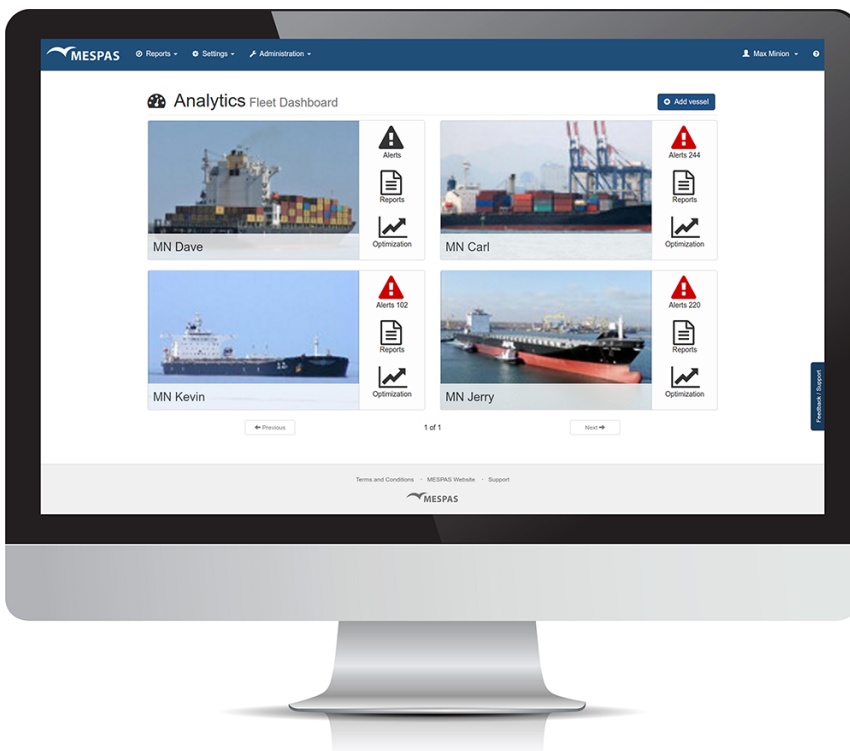

And MESPAS MRV provides more: **information already available** through noon reports, ship itineraries or onboard control systems may be **digitally integrated** into MESPAS MRV processes. Also, up- and downloading from and to external sources is at your disposal.

Are you sure, that only **correct and complete MRV information** is provided by your crews? Ensure identification and correction of gaps, anomalies and more by our new, browser based online platform – an integral component of MESPAS MRV.

Leverage information gathered through MRV and IMO requirements, and combine these insights with MESPAS **Vessel Performance Analytics** – unveil optimization potential, detect events, identify anomalies, create fuel claiming reports at a fingertip, simulate and sharpen maintenance decisions.

Unsure whether you will have the capacities to **prepare a monitoring plan** for each single vessel in your fleet? MESPAS is ready to assist with monitoring plan templates, prefilled monitoring plans according the MESPAS MRV process flow or even by preparing an individual, vessel specific monitoring plan.

Interested in a **combination of MESPAS MRV with verification services**? Together with our partner, an accredited MRV verifier, MESPAS is capable to offer lower prices for monitoring plan and data verification than competitors – based on synergies across the MESPAS community.

This is MESPAS MRV

- MRV and IMO regulation coverage
- Fully integrated process flow from vessels through to office/MRV verifier and on to public authorities
- Identification of gaps and anomalies
- Leveraging MRV and IMO requirements by combining MESPAS MRV with MESPAS Vessel Performance Analytics
- Up- and downloading information from/to external solutions

The most innovative way of accessing and using ICT solutions in the shipping industry. Efficient, scalable, complete – at predictable, low costs.
